

# Payment Center

Serving as a secure, compliant financial hub, Payment Center automates the business office and provides a one stop, comprehensive payment portal for a unified student financial experience.

TouchNet Payment Center is the foundation for automating the business office and managing real-time payment transactions. The PCI-compliant solution seamlessly connects people, processes, and technologies, creating a better user experience, regardless of payment method or channel. With Payment Center, institutions can accept a wide range of payment methods, from credit cards and debit cards to electronic checks and bank wire transfers. Payment Center's Student Account Center is quick and easy to use for students and authorized users, providing 24 X 7 access to their student account information.

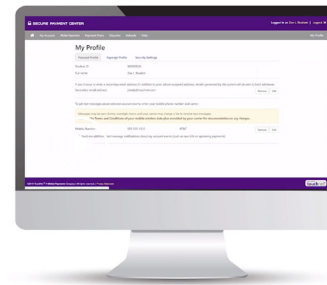

## UNIFIED STUDENT FINANCIAL EXPERIENCE

Payment Center includes a web-based Student Account Center which provides a foundation of electronic payment services for student accounts that's far from basic. Students and authorized users can log in to the self-service portal to make tuition and fee payments. It also features consent manager, parent pay, real-time posting of payments to the campus ERP system, and more.

### Student Benefits

- A safe and secure environment to make payments and view payment activity in real-time.
- Indicate refund disbursement preference by creating a payment profile with stored payment methods.
- Eliminate manual effort and ensure payments are made on time by scheduling future payments, including recurring payments such as payment plans.
- The option to provide parents or other authorized users access to their account information and to make payments on their behalf with consent manager.

## TOUCHNET PAYMENT CENTER

### CENTRALIZED MANAGEMENT

Unlike costly siloed systems, Payment Center offers centralized management of your payment system through a single system dashboard, U.Commerce. Administrators can enable desired features and configure them to meet the institution's needs. Institutions are able to easily and efficiently manage transaction reports, determine payment methods accepted, and update system configurations. In addition, Payment Center pages can be branded with university logos and colors.

### Institution Benefits

- Monitoring all data from one convenient location gives you campuswide insights that lead to better decision making.
- Dashboard view of real time transactions allows you to proactively identify and correct any issues to streamline reconciliation.
- Deliver important alerts via the Student Account Center or through targeted, automated emails to an individual student, authorized user, or group.
- Set up the consent manager to display and collect the required financial agreements, consents, and electronic signatures.
- Managing users on a per merchant level ensures staff only has access to what they need.
- Reports allow you to monitor payment transactions filtered by date, payment method, merchant, origin of payment, or individual transaction, so you have the information you need to take appropriate action for any exceptions that occur during the processing of student payments.

### RAPID SYSTEM INTEGRATION

The Payment Client is a PCI-compliant payment point that integrates with your Student Information System (SIS) to allow you to securely accept non-tuition student payments across campus via the web. This integration is accomplished through an application programming interface (API) which enables real-time communication and helps simplify data security. Payments for admissions, alumni donations, recruiting, transcripts,

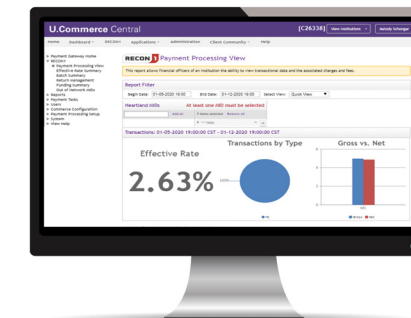

enrollment verification, registration, graduation fees, and more are enabled based on your SIS payment point features. A point-of-sale (POS) payment client is also included to accept secure, PCI-compliant payments in person.

### SECURE TRANSACTION PROCESSING

The Payment Gateway is also included in Payment Center, providing a hub for immediate transaction processing. The powerful, secure, and adaptable engine authorizes payment transactions and sends the payment data to your payment processors, bringing your campus interactions together in real time. The payment data collected is accessible in a number of reports so campus administrators can easily track, manage, and reconcile payments and payment-related transactions.

### STREAMLINE RECONCILIATION

When you add Merchant Services PLUS to Payment Center, you also get a unique management software solution that allows you to process, analyze, reconcile, and evaluate campus payments. TouchNet provides payment exception handling and day-to-day operational support for Payment Center, and handles Payment Gateway merchant configuration. Designated administrators at your institution perform payment activities such as settling batches and restricting accounts. Administrators can access daily payment processing in a high-level format or see every transaction in detail, sorted by date, time range, transaction number, or merchant ID for enhanced payment reporting. Reports pair payment authorization data with the financial institution's deposit data to simplify the student payment reconciliation process.

There's a lot more to tell you about
